LUXURY SAFES

DÖTTLING
GUARDIAN

GUARDIAN

The world has become a safer place with the world's first high-security traveling case by Döttling: the Guardian. It offers unique protection for up to six wristwatches, jewelry, cash, or important documents at any place and at any time.

A double-walled high-security tube – an in-house development by Döttling made of multiple components – is built into the leather. The hard metal component is almost as hard as a diamond and destroys tools such as drills and saws attempting to breach the Guardian.

The tube's polycarbonate content – a material also used for police shields – additionally makes the Guardian extremely impact-resistant. The material cannot be destroyed even with the biggest sledgehammers. At one end of the high-security tube there is a safe door that can only be opened with a three-digit code. If it is entered correctly the locking mechanism, consisting of four polished high-carbon steel locking bolts, opens. In brief, when locked, opening the Guardian requires incredible force and a good deal of time – time that's short because the Guardian is also equipped with a GPS transmitter so it can be precisely located.

At the same time, in spite of its high-tech security features, the 14.5-inch-long Guardian with a diameter of 5.3 inches is, at only about 8.8 pounds, a real lightweight that you can take along anywhere with an easy mind.

DÖTTLING
GUARDIAN

FEATURES

Dimensions (total, including fittings)

Length x diameter:	39 x 13,5 cm	(15.35" x 5.31")
Weight: approx.	4 kg	(9 lbs)

Standard version

Multi-walled construction consisting of several high-tech components
All metal elements and fittings made of stainless steel, shiny polished
GPS transmitter (SIM card needed)
3-digit mechanical code-combination lock (code pre-set)
Leather handle and shoulder strap
Covered with quilted calf leather (standard colours)
Interior entirely upholstered with Alcantara suede
Equipped with quilted Alcantara covered watch roll for up to 6 watches

Options

Calf leather in crocodile print, colour "Black"

Jewelry purse made of Alcantara suede

Exterior covered with any other material

LIBERTY

LIBERTY

LIBERTY

Pragmatism and luxury need not be values that Conflict with one another. The Liberty is a true high-security safe that meets the highest standards, without breaking all limits in terms of economic feasibility.

Covered with the finest calfskin or high-gloss or silk-matt lacquered on the outside and elegant Alcantara inside, with high-gloss polished fittings and an opulent enclosed input unit, the Liberty is a true Döttling safe through and through – uncompromising quality made in Germany.

Naturally, the color of the leather or lacquer and the interior as well as the number of watch winders and drawers can be freely selected. When it comes to individualism, the Liberty stringently follows the Döttling philosophy as well.

LIBERTY

Barcelona

LIBERTY

Barcelona

LIBERTY BARCELONA

Ludwig Mies van der Rohe – one of the most famous and influential architects of the modern era – created a milestone in the history of design in 1929 with the Barcelona Chair. With the Liberty Barcelona, we've created a safe that is unmistakably inspired by Mies van der Rohe's masterpiece.

Just like the original, it combines perfect form with masterful functionality. The design icon's combination of materials – stainless steel and leather – is reflected in the Liberty Barcelona. All the fittings are made of high-gloss polished stainless steel. The body of the safe is covered with the finest calfskin, while a state-of-the-art electronic lock protects the interior of the Liberty Barcelona, where the safe houses 12 precision watch winders as well as three drawers. One of the drawers is equipped with ten watch cushions for extra storage. Naturally, customers are also given the option of varying interior fittings or colors on request.

LIBERTY
Barcelona

ENGINEERING

The Liberty Barcelona is manufactured in the dimensions 100 x 63 x 53 cm (H x W x D) and is available in the German and European insurance classes VdS/EN 1 to VdS/EN 3.

For customers with higher security needs, we even offer the safe in versions up to class 5.

The starting weight of the Liberty Barcelona is 300 kg

LIBERTY

Barcelona

FEATURES

Liberty Limited edition "BARCELONA"

THE FORTRESS

THE
FORTRESS

THE FORTRESS

A new era of security: the Fortress is the safest luxury safe in the world, available in the certified security classes VdS/EN 3 to VdS/EN 5. It is ready for connection to a burglar alarm including a "silent alarm" function.

We designed the interior of the high-security safe, of which only a limited edition of ten per security class exist, with the objective of "maximum versatility." Among its features the Fortress includes eight watch winders.

Using specially designed software, each watch winder is individually controlled. In addition to an infinitely adjustable number of rotations, it is also possible to set the direction of rotation – left, right, or oscillating. Inside the Fortress there is also a humidor made of original Spanish cedar, with an electronic humidifying system. A hygrometer and a barometer, both from Wempe, stylishly provide information about humidity and air pressure.

Last but not least, the upper section of the Fortress integrates another product from our manufactory: a Colosimo two-door safe. It offers additional space for six watches that are wound with exceeding elegance by precision rotators. All of these intrinsic values require, of course, that the outer appearance of the Fortress live up to them. Therefore the corpus of the safe is handsomely upholstered with finest calfskin.

Since individuality is a given at Döttling, the Fortress is also available in other configurations and color combinations upon request.

THE FORTRESS

THE FORTRESS

FEATURES

Liberty Limited edition "The Fortress"

The Fortress provides luxury safety from the certified security class VdS/EN 3 to the highest level VdS/EN 5. It is ready for connection to a burglar alarm including a "silent alarm" function.

Dimensions (total, including fittings)

Height:	124 cm	(48.82")
Width:	67 cm	(26.38")
Dept:	52 cm	(20.47")
Weight: VdS class 3	495 kg	(1,091 lbs)
Weight: VdS class 4	550 kg	(1,213 lbs)
Weight: VdS class 5	610 kg	(1,345 lbs)

Security rating

Available in the VdS/EN security classes 3 to 5

Description

The interior of the high-security safe was designed by Döttling with the objective of "maximum versatility". Inside the Fortress, there is also a humidor made of original Spanish cedar. The CIGARSPA electronic humidifying system ensures that the treasures inside the humidor are always stored under ideal climatic conditions. A hygrometer and a barometer, both from Wempe, stylishly provide information about humidity and air pressure. Metal fittings in polished finish.

ENGINEERING

You don't purchase a Döttling safe for yourself alone, but also for future generations. So only the highest standards are good enough. This immovable focus on highest quality, combined with multistage, long-term test series, ensures the durability of our luxurious high-security furniture. The Bel-Air is built according to the most rigorous industry standards and complies to the security rating VdS/EN 3 with the option of an upgrade to VdS/EN 4.

We employ patented plating made of thermally treated hard sintering and ceramic stones with a hardness grade of 9 (out of 10). Our electronic locking system offers a number of security functions along with unexcelled convenience.

MAGNUS

THE BEL-AIR
High Security Luxury Safes

MAGNUS

THE BEL-AIR MAGNUS

The Döttling engineers have made the impossible possible: The Bel-Air Magnus, which is nearly twice the size of its prototype, The Bel-Air.

Opening the two doors of this high-security safe from its center is like a matchless orchestration of strength and mass, exposing the wonderfully designed inner workings to the eye. It goes without saying that The Bel-Air Magnus possesses the same endless customization possibilities, both outside and inside, as every single object from the manufactory in Sindelfingen.

Yet its powerful dimensions give it the rating of "outstanding."

GrandCircle

GrandCircle

GRANDCIRCLE

With the GrandCircle, Döttling has created a stand-out among the outstanding. Fifty-two individually controllable watch winders enclose a limited, hand-made Naeschke pendulum clock with an unusual runtime of four weeks after one winding. The base of the GrandCircle also accommodates the world's smallest hi-fi subwoofer by Elac, a VDS/EN Class 2 high-security safe with certified fire protection, eight further watch winders and jewelry drawers, a climate-controlled humidor made of Spanish cedar wood, and an exclusively implemented minibar.

THE CHAMELEON

High Flexibility Luxury Safes

the Chameleon

High Flexibility Luxury Safes

THE CHAMELEON

The use of a luxurious, high-security safe and limited space is no longer a contradiction. The innovative swing-door mechanism, which disappears inside the safe when opened, allows The Chameleon to provide excellent service in a very small space. While guaranteeing the highest security standards, this Döttling safe shares the characteristic of its shy namesake by adapting itself to its surroundings.

the CHAMELEON
High Flexibility Luxury Safes

THE CHAMELEON
High Flexibility Luxury Safes

CUSTOMIZATION

The Chameleon takes the concept of customization into a whole new dimension. You choose the interior, material, and color here, as well as the body of the safe. High and narrow, low and wide, with single or double doors, subtly integrated into an existing piece of furniture, or boldly positioned for all to see – the choice is yours. In fact, the only unchanging features here are the flawless aesthetics, perfect craftsmanship, and uncompromising quality.

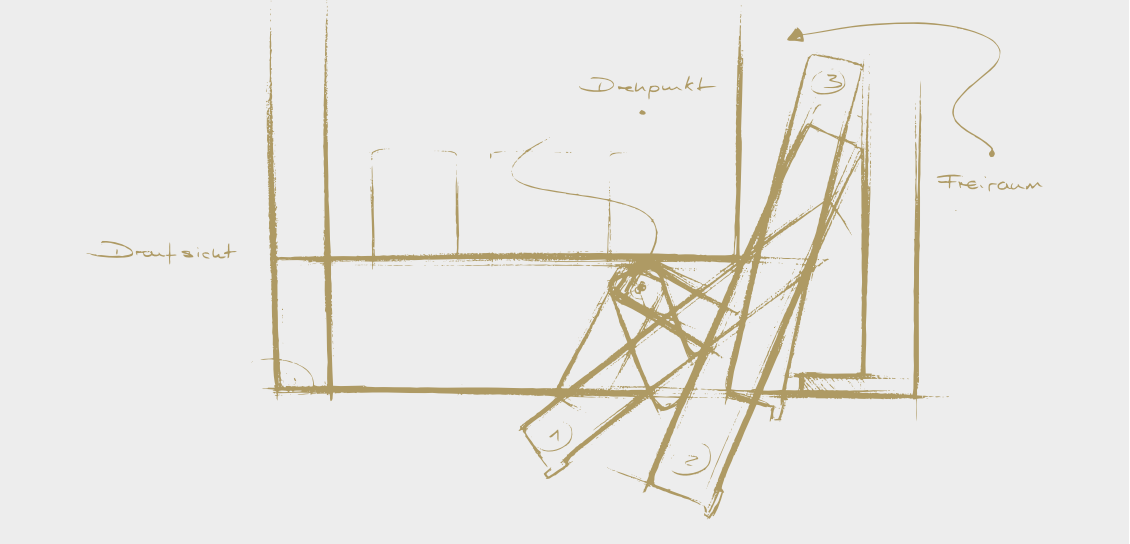
That choice is ours.

THE CHAMELEON
High Flexibility Luxury Safes

ENGINEERING

The highly flexible safes in The Chameleon series were originally created to meet the needs of various yacht owners.

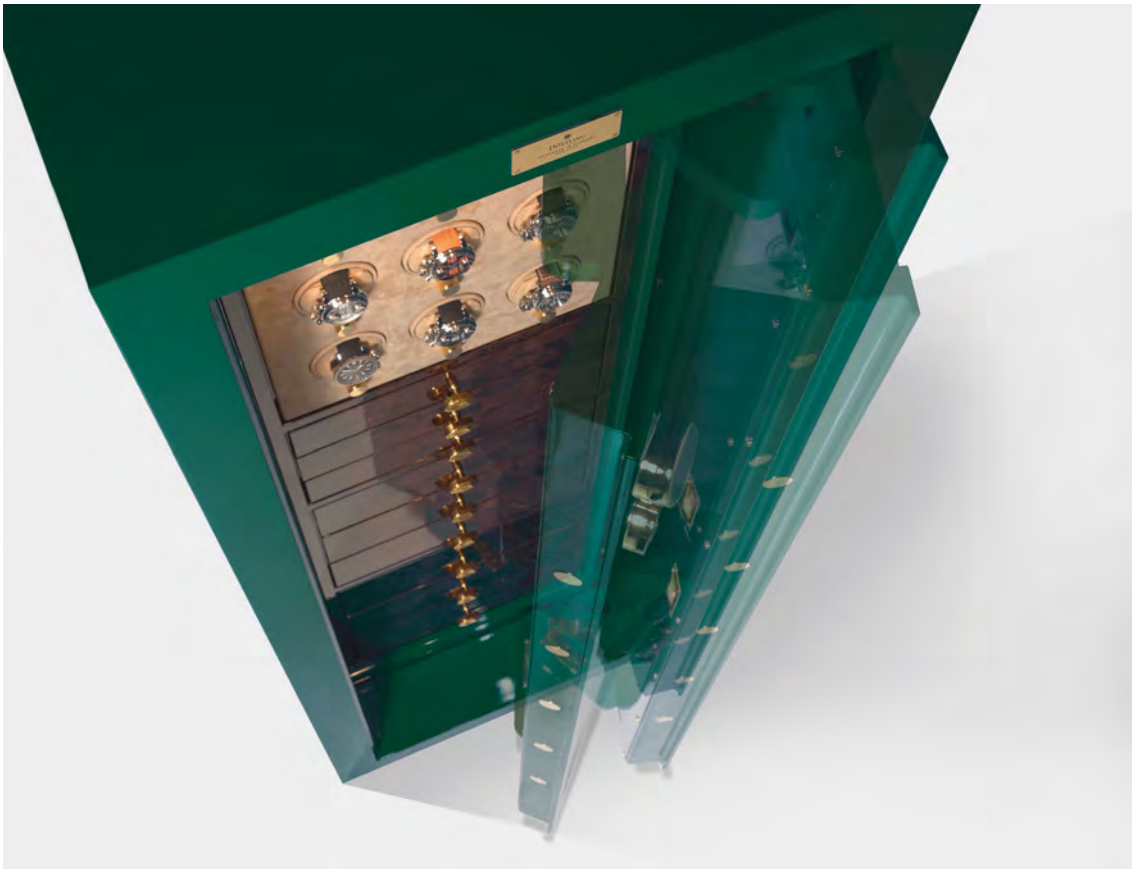
Due to the unlimited scalability of height and width, The Chameleon is also increasingly integrated into dressing rooms, wardrobes, dressers, and similar locations.



FUNCTIONALITY SWING DOOR

Some say that the door of The Chameleon disappears upon opening as if by magic. We cannot confirm that, although the highly innovative closing mechanism of this adaptable masterpiece is, of course, ultimately the consequence of compelling engineering artistry.

What we can certainly attest to is that each Döttling safe exerts a magical allure on its viewers.



The Gallery

The Gallery

THE GALLERY

Something that has always been the case about safes produced by the Döttling manufactory: Once the door is closed, the precious items inside are stylishly protected from unauthorized access, but they cannot be admired.

The latest luxury safe from the Sindelfingen-based safe manufactory – The Gallery – lives up to its name, ensuring that treasures no longer have to shine in secret. Its door, made of bulletproof glass, offers a view inside at all times – without any loss in security whatsoever.

Simply uncompromising. And not just in terms of functionality, but also quality and design.

The Gallery

ENGINEERING

A first glance at The Gallery reveals: Its design with high-gloss nickel fittings and sides covered in the finest calfskin is closely aligned to The Bel-Air safe range, reflecting the timelessly elegant appearance of overseas travel cases from the Roaring Twenties. With one major difference. We've designed the door in such a way that we could integrate a bulletproof, 30-mm-thick armored glass window, which allows a clear view of the treasures inside, even when closed. overseas travel cases from the Roaring Twenties.

This safe is a real tour de force from the Döttling technicians, as the bolt work had to be mounted within a very confined space around the glass without even remotely compromising security. Another technical highlight that specifically reflects Döttling's attention to detail: The bulletproof glass window can be switched from transparent to opaque by remote control.

The interior of The Gallery, lined with the finest Alcantara leather, features
24 precision watch winders – protected by a Döttling fingerprint high-security lock – which can optionally be equipped with innovative Touch & Move technology.

There are also four drawers with black-stained Japanese Tamo Ash veneers, an extendable table, and four secret compartments. Seventeen infinitely dimmable LED spotlights impressively stage the treasures inside.

Narcissus

Narcissus

Narcissus

NARCISSUS

The Narcissus is the groundbreaking result of a unique collaboration. Conceived by Karl Lagerfeld in Paris and built by Döttling in Sindelfingen, it breaks through both technical and aesthetic limits.

A puristic room installation at first glance, the safe only reveals its capabilities when it identifies and is activated by its owner. Then two handcrafted interior cabinets containing watch winders and jewelry drawers emerge from its steel body, which weighs 800 kilos and is sheathed in high-gloss, chrome-plated aluminum. Fully automatically, as if controlled by an invisible hand.

This highly innovative safe is also a very personal statement by a public figure who has made, and continues to make, history in the worlds of fashion and photography.

Gatsby

GATSBY

GATSBY

The Great Gatsby is known for its masterful portrayal of the Roaring Twenties – an era of economic prosperity and fascinating cultural dynamism in the major cities of New York, London, Berlin, and Paris. In this decade, jazz music blossomed, women's fashion was redefined, and art deco reached its peak.

We kept all of this in mind when developing the Döttling Gatsby. The ways in which this luxurious high-security safe with the perfect compact size can be customized are nearly limitless. A variety of the finest leathers, colors, and interiors are available, enabling even the most extravagant combinations.

At the same time, the Döttling Gatsby features the opulent decor elements of the Döttling flagship The Bel-Air – saddle leather handles and edge straps with bullen-nails. All metal fittings are highly polished, and as with every Döttling, the Gatsby is handcrafted in Germany by our experts in accordance with the highest security standards.

Our first edition pays homage to the famed compositions of contemporary masters of luxury. A source of inspiration and, at the same time, an invitation to our customers to create their own individual Gatsby masterpiece.

Interior entirely upholstered with Alcantara suede.
4 Döttling precision watch winders with Alcantara suede leather watch pads.
1 drawer with Alcantara suede leather interior and front.

Options

Crocodile leather print, black

8 Döttling precision watch winders

Drawer interior for 12 watches on cushions

Further bespoke interior configurations and material selections

FOCUSLINE

FOCUSLINE

Quality has its price, but that doesn't mean it can't be affordable. For proof, just look at Döttling's FocusLine, the first series from our safe manufactory for budget-conscious connoisseurs.

Of course, FocusLine still provides maximum security for your watches, jewelry, documents, and much more. And in terms of workmanship and aesthetics, it is a genuine Döttling through and through – that is to say, uncompromising.

The FocusLine fulfills VdS/EN class 1 security requirements and offers certified, 60-P class S fire protection. This means that documents inside the safe can withstand one hour in an ambient temperature of 1,090 degrees Celsius (1,994 degrees Fahrenheit). The lock is equipped with an emergency opening function. In the event of a technical defect, for example caused by fire or attempted burglary, the safe can still be opened with the high-security key. This eliminates the need for a costly emergency opening.

The FocusLine safes can be equipped with watch winders and/or drawers to store documents, jewelry, or watches.

FEATURES

Description

Safe completely covered with Alcantara or completely high-gloss or
silk-matt lacquered (standard colours)
Chrome-plated keypad for code entry and handle
Electronic 6-digit code combination locking system
Interior entirely upholstered with Alcantara suede (standard colours)

Security rating

VdS/EN class 1 and certified 60-P class S fire protection (latter only for lacquered version).

ANTIQUE SAFES

Legends

Finest Antique Luxury Safes

No. 149

LEGENDS

The globally unique Legends series consists of highly exclusive antique safes, lovingly restored to become modern eyewitnesses of historic craftsmanship.

Whether an early 20th century Wilhelminian security cabinet, a mid-19th century Napoleonic coffre-fort, or a work commissioned by the last Medici of Milan in 1740, each antique safe that leaves the Döttling workshop is an absolute one-of-a-kind piece.

The outward appearance and inner workings are defined step-by-step in personal consultations between the customer and an individual advisor from Döttling. The unforgettable impression that a Legends safe leaves on its viewer is marked by its very own personal history.

The number and availability of high-quality antique safes are exceedingly limited, but there are no limits to the interior fittings of a Legends safe. Whether fitted with humidors, cocktail bars, jewelry compartments, watch winders, collector cabinets, or lockable drawers, the only premise is your own personal passion.

We realize every well-conceived fitment variation with the aid of state-of-the-art technologies and the finest craftsmanship.

All of the Legends safes by Döttling are alike in only one aspect: they are the grand expression of a lifestyle reserved for only a few.

TABLETOP OBJECTS

DÖTTLING
GYROWINDER

DÖTTLING
GYROWINDER

GYROWINDER

The Döttling Gyrowinder is a unique feat of engineering. For the first time ever, the high-precision instrument allows completely free rotation of the watch in all directions – including a complete rollover – which comes closest to the movement of the watch on one's wrist.

This already sets the Gyrowinder distinctly apart from conventional watch winders, which merely rotate a watch on a fixed axis, either to the left or to the right.

What also makes the Gyrowinder so unique is the broad scope of adjustment possibilities. For example, since watches all have different weights, it comes with a set of counterweights – like an antique scale. Using them, each watch can be individually balanced.

The optimal position of the Gyrowinder is set beforehand using the integrated spirit level and three adjustable feet.

The Gyrowinder is visually reminiscent of the rich tradition of nautical navigation instruments, with their gimbals and refined materials, created for eternity. The source of inspiration for the Gyrowinder, however, has precious little to do with seafaring romance, for the idea came from a visit to the Kennedy Space Center in Florida.

More precisely, after the test of a training instrument for aspiring astronauts, the functionality of which has now been integrated into the Gyrowinder.

In this sense one could say that under its hand-blown, crystal glass cover, the Gyrowinder unites the best of both worlds.

COLOSIMO

COLOSIMO

COLOSIMO

With the Colosimo, Döttling is once again making history in the world of safes.The smallest high-security safe in the world is the first tabletop safe from Döttling – and despite its size, it is definitely a commanding eye-catcher.

Inspired by vaults found in American banks during the Prohibition, the complex technology of the mechanical locking mechanism has led to the term "haute safeology" being coined.

Döttling can furnish the body of the safe with every possible surface: for example, a carbon finish reminiscent of the high-tech world.

Or radiating refinement and comfort when covered in the finest calfskin.

There are no limits to the possibilities when it comes to material variations, and with them, your imagination.

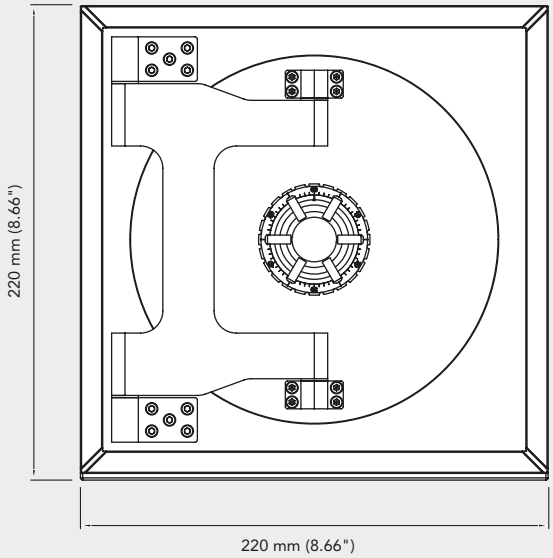
COLOSIMO

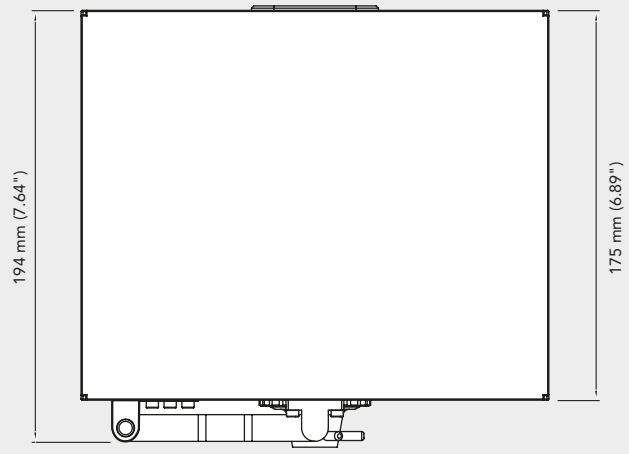
COLOSIMO

ENGINEERING

When the door of the Colosimo is opened – only after entering a three-digit personal code, of course – the sight is particularly striking. This is when the smoothly functioning, intricate locking mechanism is revealed, an aesthetic gem, with 16 radial, specially hardened locking bolts and 32 gold-plated precision gearwheels, as masterfully crafted as the inner workings of a fine clock.

The Colosimo can be equipped alternatively with a Döttling precision watch winder or with a cedar wood humidor insert and integrated air humidifier.





COLOSIMO

COLOSIMO

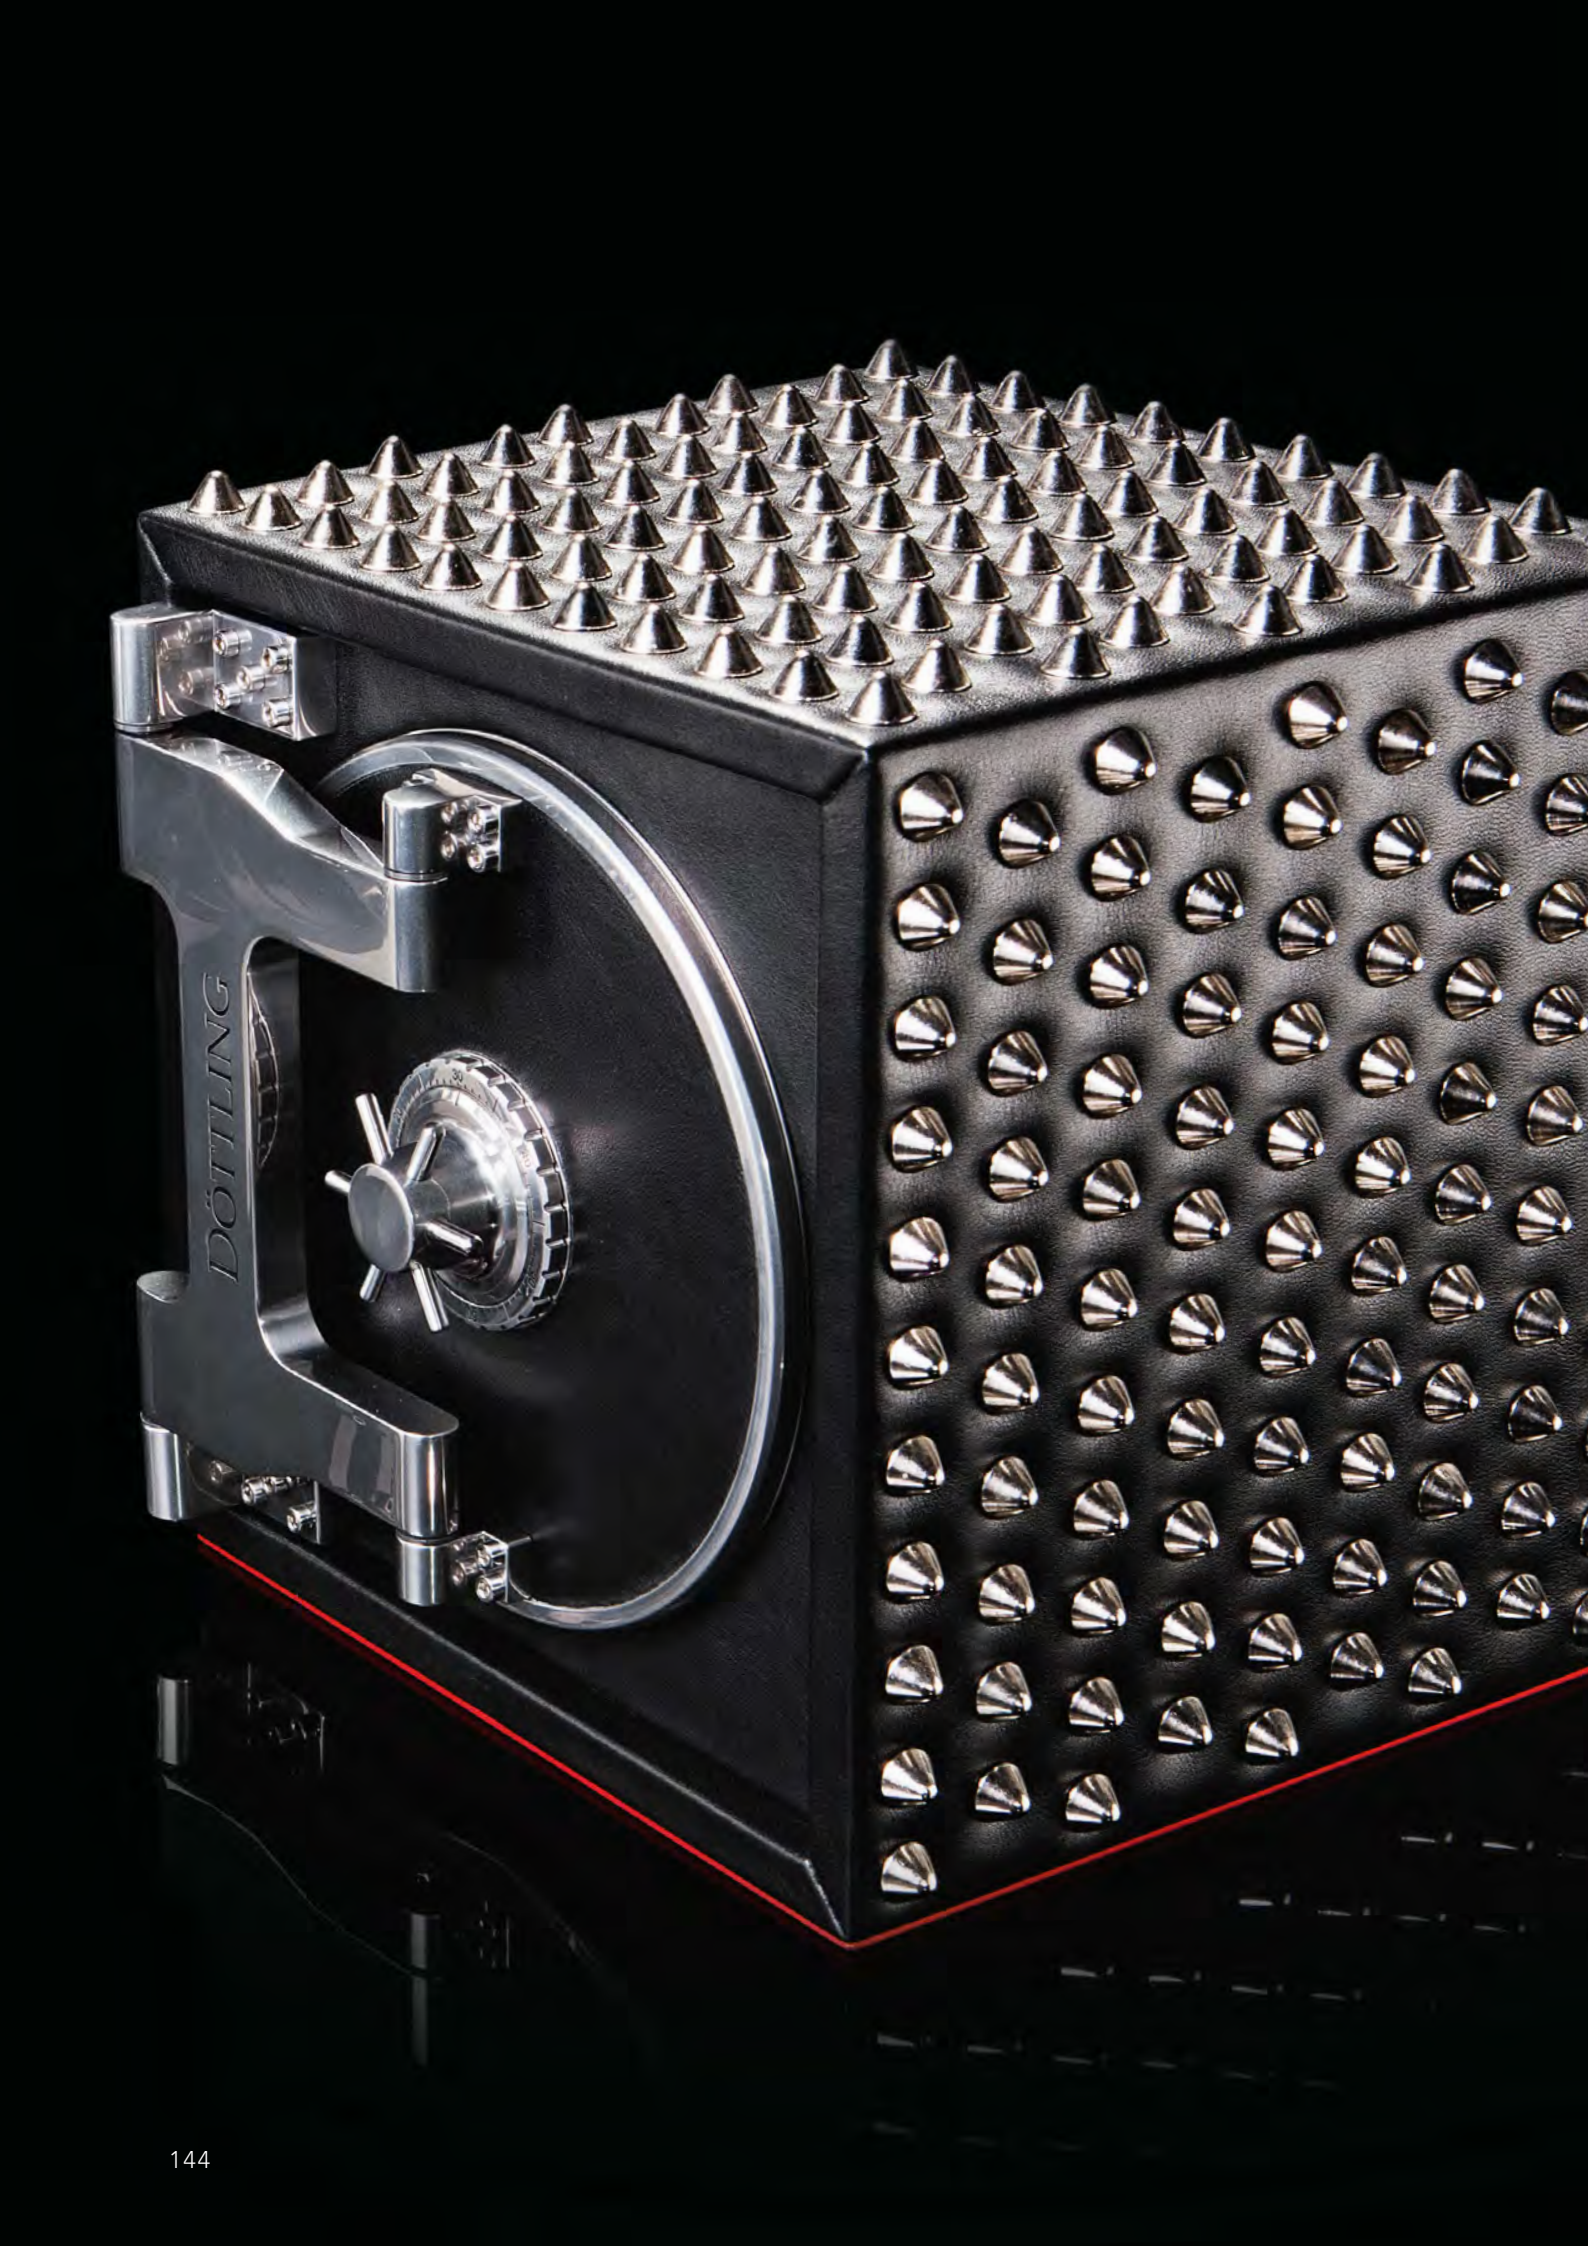
»THE SPIKE«

COLOSIMO

»THE SPIKE«

COLOSIMO THE SPIKE

A model which many find extremely sexy – and not only the actresses from "Sex and the City": our inspiration for this safe was the shoe creations of the designer Christian Louboutin, specifically the model Lady Peep Spikes. The safe is covered with the finest black calfskin and studded with high-gloss polished chrome spikes. As the distinctive mark of Christian Louboutin shoes are their red soles, the Colosimo The Spike also stands on a red base.



DÖTTLING

COLOSIMO

»THE MIES«

COLOSIMO

»THE MIES«

COLOSIMO THE MIES

Ludwig Mies van der Rohe is one of the most famous architects and designers of the modern era. One of van der Rohe's preferred material combinations – stainless steel and leather – is also used for the Colosimo The Mies. Moreover, just like the masterpieces of its famous namesake, the safe combines perfect form with masterful functionality.

DÖTTLING

COLOSIMO

Double Wing

COLOSIMO

Double Wing

COLOSIMO DOUBLE WING

The Colosimo Double Wing orients itself on its famous automotive archetype: the Mercedes-Benz 300 SL, better known as the Gullwing.

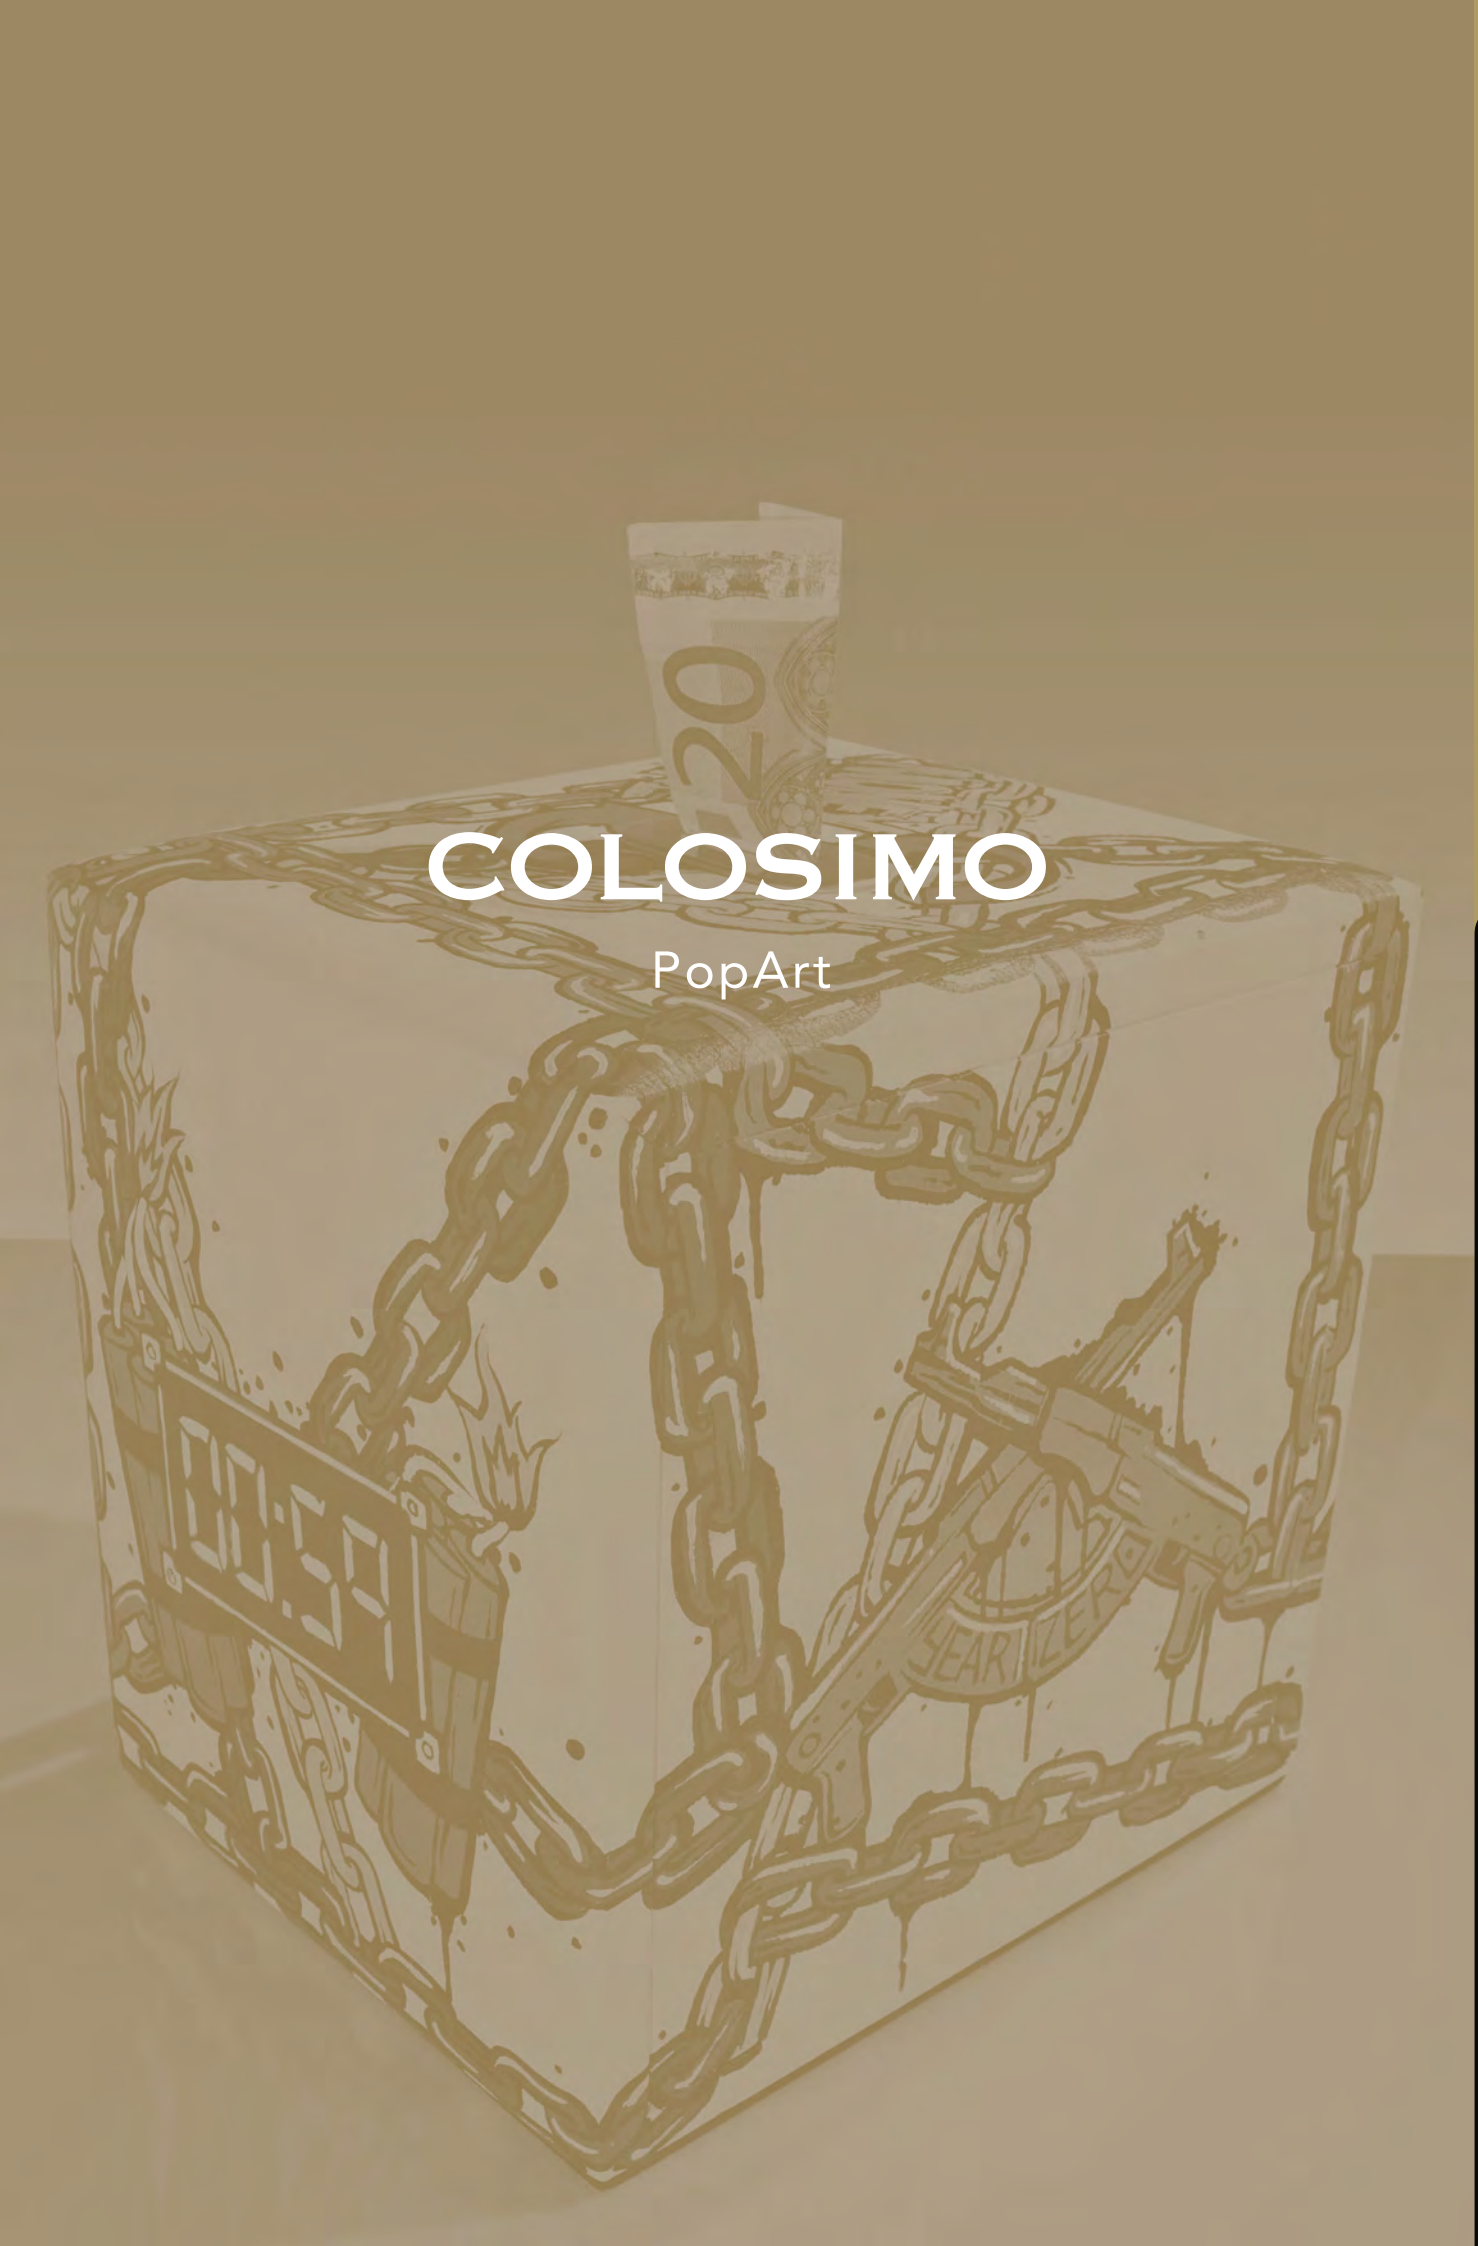
The Wempe Zeitmeister clock, positioned in the center just as on the instrument panel of the 300 SL, is the first thing to catch the eye. The toggle switches and the covering made of finest red calfskin also represent a charming homage to the interior of the automobile legend.

In spite of all the attention to nostalgic detail, the Colosimo Double Wing sets new standards in terms of technology – something it also has in common with the 1950s icon. After entering the three-digit personal code, the highly intricate locking system opens.

The doors swing open and provide a view of two precision rotors, which elegantly wind three watches each.

In a certain sense, one could say that the Colosimo Double Wing thus bridges tradition and innovation in a highly unique way. An optimal precondition for becoming a legend itself.

WEMPE
Zürich



COLOSIMO

PopArt

COLOSIMO POPART

Everyone knows the money bin of Scrooge McDuck from the world-famous Walt Disney comics. With this legendary prototype from our childhood and adolescent years in mind, we developed the Colosimo PopArt.

Designers from Year Zero in London are responsible for the unique look of the Colosimo PopArt. Where international stars like Beyoncé Knowles stop to shop, each individual safe is painted by hand, both outside and inside. There is a slot on the top of the safe for cash bills and other treasures.

Thanks to the security glass on the front of the safe, one can always keep an eye on the growing wealth inside.

This makes the Colosimo PopArt truly the most exclusive cash box in the world – and, at the same time, an extraordinarily charming homage to an icon of comic culture.

The Chest

THE CHEST

Great artisanship applied to the smallest space is quite an unusual challenge – and therefore ideal for us at Döttling.

We faced this challenge and created an entirely new series of miniature safes called the Chest.

The Chest

ENGINEERING

In spite of their extremely compact design, Döttling's new miniature safes naturally have a fully functional locking mechanism with a double-bit key safe lock. When the carefully handcrafted mechanism is opened, it reveals another unique feature of the Chest series: While the design is inspired by antique Italian and French masterworks of the late eighteenth century, the inside is fitted with the latest state-of-the-art technology. Döttling precision watch winders, for example, which can, on request, be equipped with our new, electronically controlled Touch & Move technology.
The discreet illumination system always puts the treasures housed inside in the perfect light.

An additional high-tech feature is the optional, higher priced, integrated alarm system: When the Chest is removed from its position a deafening alarm sounds to discourage thieves. Should the safe ever be burgled, however, it is equipped with a GPS device that always enables its precise location to be tracked.

As with all of the products leaving our manufactory, the finest materials are used to create the Chest, for example braided, patinated steel bands combined with ornamental upholstery nails on the body of the safe and an interior of the finest nubuck calfskin.

Initially, Döttling will produce two versions of the Chest: the single-door Chest 8 offers space for eight watches on four precision watch winders and four cushions. The two-door Chest 15 stores ten watches on precision watch winders and five on cushions.

Tabletop Humidor

Tabletop Humidor

TABLETOP HUMIDOR

This tabletop humidor may seem familiar to some enthusiasts of the finest in locksmith craft. And quite rightly so, because a similar model is integrated into the safes of our series "The Fortress". After numerous customer requests, we are now offering a tabletop version. And, of course, it also has a number of features that are unrivaled.

This begins with the fact that the humidor can be opened by simply pulling out a drawer, whereas other humidors usually have a flap-hinged mechanism. The interior is made of original Spanish cedar and is atmospherically showcased by LED spotlights. The heart of every humidor is, of course, the humidifier. In the case of our new tabletop humidor, a CIGARSPA product has been perfectly integrated into the drawer. Its performance can be monitored at any time with the help of a hygrometer, barometer, and thermometer made of brushed stainless steel.

And because your individual desires are our first concern at Döttling, the interior of this unique object is naturally also configurable as a wonderful storage box for watches.

Naturally, the noblesse of the interior must be matched by the exterior. For this reason, we chose to cover the humidor in high-quality calfskin. However, numerous other surfaces, including wood or a high-gloss varnish, are possible upon request.

Tabletop Humidor

Le Petit
DÖTTLING

Le Petit

LE PETIT

Le Petit is a handmade tabletop trunk, covered with finest Italian calf leather and furnished with more than 600 hand polished nails.

It hosts 4 high-precision watch winders that are individually programmable via touchscreen or remote control and a suede covered and diamond stitched interior that is put in the perfect light by a dimmable lighting system.

Security is provided by a personal fingerprint lock and a deafening acoustic alarm that appears as soon as Le Petit is lifted up or moved.

There has never been more luxury, prestige and knowledge in a watch winder than in Le Petit from the house of Doettling.

Le Petit is available in the following color combinations: beige/dark brown, brown/beige, black/black and pink with white edges.

ROOM CONCEPTS

ROOM CONCEPTS

Collector
rooms
by DÖTTLING

COLLECTOR ROOMS

Whether watches, jewelry, works of art, or weapons – private collections of the highest quality also require prestigious and secure rooms.

Creating an exquisite ambience for these valuables, from basic planning through the design concept to the complete execution: our specialists in the areas of wood, metal, leather, and design are predestined for this task. With Collector Rooms we provide a service to end customers, architects, and designers that leaves no wish unfulfilled. It all starts with the choice of two basic principles: a fully secured room with Döttling high-security access or a room that can be normally entered featuring Döttling safes naturally integrated into the furnishings. The finest materials and high-security display cabinets to showcase special exhibits round out the offer.

For the first time ever, Döttling is offering this end-to-end service package from a single source.

DÖTTLING

SAFITURE

Closet Island

CLOSET ISLAND

The best way to protect valuables from unauthorized access is to make them effectively "invisible." This is the idea behind Safiture, the world's first and only line of security furniture by Döttling. It is a series of high-quality furniture that does not reveal the fact that the interior houses optimally protected storage for valuables of all kinds.

But we also guard against threats in other ways – after all, we have been experts in this field for over 90 years. The valuable contents of the furnishings can only be accessed using a special mechanical or electronic release mechanism known only to the owner.

For example, the Closet Island has new, in-house-designed, high-security drawers with an integrated electronic safe lock. They are made entirely of steel with construction based on our safes. The interior is custom-made according to owner requirements, for example equipped with automatic watch winders or jewelry compartments. To ensure maximum security, the Closet Island can also be connected to a home alarm system. Special highlights of the Closet Island are fittings with bulletproof glass panes and drawer illumination. This allows owners to be able to view their valuables even when the drawers are closed.

As for individuality, the same applies for the Safiture security furniture series as for all of our products: there are hardly any limits to customers' desires. Around the core – the security center – the safety furnishings can be produced in all imaginable sizes, décor, and materials so that they harmoniously fit into the customers' present interior design. All work is carried out in finest, hand-crafted quality by selected leather specialists or cabinetmakers – either on-site or, on request, directly in our manufactory.

This makes the Safiture security furniture line a fascinating combination of outer aesthetics and persuasive inner values.

SAFITURE

Further Objects

SAFITURE/FURTHER OBJECTS

The same conditions apply for our Safiture security furniture series as for all products made by Döttling: there are hardly any limits to customers' desires. For example, this object can be made both with and without the safety function. The exterior is produced in the highest hand-crafted quality from all conceivable materials according to the customer's demands.
